### REASONS FOR ALLOWANCE

Claims 9 and 11-25 are allowed.

The following is an examiner's statement of reasons for allowance: With respect to the instant compositions allowed, the examiner notes that the showing by applicants summarized in Table 1 gives sufficient evidence of unobvious physical properties obtained from photosensitive flexographic plates when making use of the limits of  $2.5 \leq (2 \times W2 + 3 \times W3 + 4 \times W4) / (W2 + W3 + W4) \leq 3.8$  with respect to the combined properties of smoothness, antiflow, stickiness and thin line reproducibility. The comparisons for to high of instant A-B diblock in comparative Example 1 and the showings in Comparative 2 and 3 for above the range and below the range of mixtures of dibranch, tribranch and tetrabranch product are held to also support evidence of unexpected results when using these ratios over either a fully tetbra block coupled sample or a linear diblock coupled sample as found in the prior art of record such as the JP 10-73921 reference wherein no example within this range was found and the range while overlapping does not point to the unexpected properties of shown by applicants for the range of  $x+z=3$  and  $n=1$  and  $m=1$ . The examiner adds to the record an English machine translation of JP 10-73921 as further evidence that the range of blocks and type of blocks set forth in the instant invention are not explicitly set forth by JP 10-73921. The working example of JP 10-73921 does not read on the instant combinations of coupled block polymers but instead of having a styrene block at all ends of the coupled polymer has an unsaturated diene block as one coupled unit and an hydrogenated block and styrene block as the other two coupled blocks. The instant compositions require specific ratios of diblock polymer, and specific weight ratios of mixtures

comprised of specific diblock, triblock, tetrablock coupled block polymers to obtain plate with the unobvious combination of properties set forth with respect to cold flow, adhesiveness and smoothness of product yielding an unexpected fine line reproducibility.
